anglianwater

Our purpose
is to bring
environmental
and social
prosperity to the
region we serve
through our
commitment to
Love Every Drop.

We are geographically the
**largest water and sewerage
company** in England and Wales

Serving
7 million
people across the East
of England and Hartlepool

We operate and maintain

39,248km

of water mains.

Laid end to end, this is further
than a trip to Sydney and back

And we operate and maintain

77,300km

of sewers

Laid end to end
this is almost
twice around
the earth's
circumference

88% have
a meter fitted

We employ around **6,000** people, and
work alongside a further **3,000** alliance
partners and contractors.

Our AMP8 plan will
see us create circa **7,000**
new jobs across the region

We pump less water into supply
every day now than we did in
1989, despite supplying

26% more properties

Since privatisation in 1989, Anglian Water has invested **£16.9 billion** improving services in our region.

What's happening and why?

We're investing over £1 million to upgrade over four kilometres of pipes in Lower Boddington to make sure your supply is safe and reliable for years to come.

We'll use a technique called directional drilling to install most of the new pipeline. This means we can put new pipes underground without having to dig up large areas. It also means we can do the work quicker and reduce our carbon footprint

This work is part of our ongoing commitment to protect the environment and support the communities we serve.

Once it's done, you'll see fewer bursts and interruptions, and your water quality will be much better – helping to fix the discolouration issue that's been affecting some homes for a while.

Water is our business.
We handle with care, and we don't cost the earth.

anglianwater

By digging less to install new pipes, we cut our carbon footprint and help protect the environment – while also reducing disruption for customers and road users.

Open cut technique

anglianwater

What we're doing to reduce disruption:

- Dedicated Customer Experience Specialist for the project to manage customer contacts and communications
 - Diversion route maps available on our project webpage
- Options to use electronic gates with codes to access in and out or we can keep half of the road open and fully closed at the other for access only
 - Clear signage showing diversion routes and signs being checked daily
 - Access for all residents and businesses within the road closure
 - Bin collections as normal
- Regular project updates via letters, emails, text messages and targeted social media
 - Regular updates in the Boddington News Facebook group
- Press release to local media and traffic radio notification about the road works
 - "Business open as usual" signs where needed
- Access for emergency services always maintained during working hours

The challenge

Road closures

We need to work in and around local roads as it's the only safe way to lay the new pipes.

On wider roads we can sometimes use traffic lights to keep traffic moving. Here the road is too narrow, so the only safe option is to close it.

We'll always make sure residents can still get to their homes. This could be by leaving one side of the closure open just enough for access, or by using electronic gates with a simple code. We haven't chosen which approach to use here yet and would welcome your feedback.

HS2

We know there's already been disruption in the area because of HS2. That's why we'll do everything we can to keep any extra disruption to a minimum. We're also open to hearing your ideas on how we can make this work easier for your community.

Customer contact

You'll have a dedicated Customer Experience Specialist throughout the project. They'll be your single point of contact — ready to answer questions, share updates and help with any concerns.
